

TYPICAL PROJECT PROFILE DAM INSTRUMENTATION AND SAFETY MONITORING

Phu Kham Copper-Gold Project Phu Bia Mine Ltd – Lao PDR

The Project

Geotech International is currently providing turn-key supply of instrumentation, installation and monitoring for the highest tailings dam in Asia. The mine is reported to provide 30% of the total amount of the export earnings of the Lao PDR.

The dam is being built in stages over a multi-year life-of-mine period. Thus all instrumentation cabling and monitoring installations have to be able to be raised as the height of the dam increases over time.

The Services Provided

Past and on-going work includes:

- ✓ Design of performance monitoring instrumentation and readout system
- ✓ Procurement of instrumentation
- ✓ Installation of instrumentation
- ✓ Installation of automated readout and telemetry services
- ✓ On-going operation and maintenance support on a 24 hour turn-around basis
- ✓ Up-dating of the instrumentation over time as new measurement requirements are established by the mine's dam performance Consulting Board of Experts

Phu Kham Mine Tailings Dam – Lao PDR

Geotech International performing geotechnical investigation and instrumentation installation at Phu Kham Mine tailings dam using Geotech International Bort Longyear drilling equipment - Lao PDR

**Instrument installation and dam performance monitoring at Phu Kham mine tailings dam
All capable of being raised as the elevation of the dam is increased over time - Lao PDR**
